With its own office building, the Mobimo Verwaltungs AG wants to communicate to their customers with high quality, convincing architecture and an ecologic construction their company's offer. The operating spaces, in which different teams are working, are connected to a central interior room. This meeting place, which creates transparency and encourages communication, is shaped by large scale <folded> colored glass walls. The lighting in this central area is realised with context independant, round shaped ceiling mounted luminaires.
